

Rutvik Yamkanmardi

[linkedin.com/in/rayamkanmardi](https://www.linkedin.com/in/rayamkanmardi) rutvikay@gmail.com (408) 455-5366

TECHNICAL SKILLS

Programming Languages: C, C++, Python, Java (8, 17), Go, JavaScript, SQL

Backend & Frameworks: Spring Boot, Spring Data JPA, Node.js, Express.js, Django, RESTful APIs

Databases: MySQL, PostgreSQL, Cassandra, MongoDB

Cloud & DevOps: AWS, GCP, AWS Lambda, Docker, Kubernetes, Github Actions, CI/CD Pipelines, Automation, Webhooks, NGINX, Apache, Apache Airflow

Enterprise Systems: Distributed Systems, Data Modeling, Performance Tuning

Messaging Systems: RabbitMQ (primary), familiarity with Apache Kafka concepts

Tools & Workflow: Agile, JIRA, Git, Linux, WebSockets, Performance Profiling Tools

Frontend & UI: HTML, CSS, JavaScript, TypeScript

EXPERIENCE

Samsung Electronics America

December 2025 - Present

Software Engineer

- Contributed to an enterprise-wide internal marketing segmentation platform using Python, Node.js, and React; supported feature development across backend, frontend, and data layers.
- Developed and modified audience segmentation logic leveraging Featurebase enabling marketing teams to create more granular and targeted campaign segments
- Diagnosed and resolved production issues in data pipelines and application services, reducing incident downtime from 4 hours to 2 hours and improving system reliability
- Built and maintained large-scale data pipelines orchestrated with Airflow on GCP, ensuring accurate processing and loading of marketing datasets

SAP UCC

March 2024 - August 2025

Backend Engineer (Team Lead)

- Designed scalable distributed backend systems using Node.js and Express.js; reduced page load times by 10x.
- Architected database schemas (MongoDB, PostgreSQL) optimized for high-volume transactional access, applying principles directly transferable to Oracle SQL and ERP data models; improved query latency by 50%.
- Led a team of 3 engineers in agile sprints, resolving blockers and tracking velocity using JIRA.
- Applied object-oriented design principles to refactor legacy components for better testability and maintainability.

IndiaMart

May 2022 - June 2023

Software Engineer

- Refactored and debugged legacy PHP and Golang codebases; restored functionality for large customer catalogs, resulting in improved customer satisfaction.
- Containerized services and deployed with Kubernetes using probes, ConfigMaps, Secrets, and autoscaling.
- Developed robust, high-availability REST APIs serving millions of daily requests.
- Migrated messaging to RabbitMQ and transitioned backend to Cassandra, leveraging advanced database design and optimization principles applicable to Oracle Database environments; reduced system latency and increased throughput
- Collaborated on system design decisions, focusing on fault tolerance and reliability under high load.

EDUCATION

California State University - Chico

May 2025

Master of Science in Computer Science

GPA: 4.0/4.0

Indian Institute of Information Technology - Dharwad

May 2022

Bachelor of Technology in Computer Science and Engineering

GPA: 3.52/4.0

PROJECTS

Crosswalk Pedestrian Safety System | *OpenCV, Jetson Orin, C++, Yolo Object Detection*

May 2024

- Built a CUDA-accelerated YOLO-based pedestrian detection system on Jetson Orin with 90%+ accuracy.

Multiplayer Chess Website | *Django, JS, GCP, Postgres*

October 2024

- Developed a real-time, Dockerized Django chess app with WebSocket support and GCP-scaled backend

Trucking Logistics Solution | *Spring Boot, Angular 14, PostgreSQL*

May 2024

- Built a Spring Boot–Angular application for managing driver logistics, routes, and trip statuses with real-time updates and PostgreSQL-backed persistence.
